

2-8

(Bubble Sort Algorithm)

```
array=[ 5, 3, 4, 6, 9, 1, 7, 2, 0, 8]
def BubbleSort(data):
    n = len(data)
    for i in range(n - 1):
        for j in range(n - 1 - i):
            if data[ j ] > data[ j+1 ]:
                temp = data[ j ]
                data[ j ] = data[ j+1 ]
                data[ j+1 ] = temp
    return data

print(BubbleSort(array))
```

```
lower = 100
upper = 200
for num in range(lower, upper+1):
    if num > 1:
        for i in range( 2, num ):
            if num % i == 0:
                break
        else: #for 例外処理用else
            print(num)
```

(Least Common Mutiple, LCM)

```
def LCM( num1, num2 ):
    if num1 > num2: #大数を割り切れない場合
        greater = num1
```

```

else:
    greater = num2
while True:
    if (greater % num1 == 0) and (greater % num2 == 0):      #i
        break
    greater += 1
return greater

n1 = int(input("请输入第一个数"))
n2 = int(input("请输入第二个数"))

print("LCM = " , LCM(n1, n2))

```

(Greatest Common Divisor,GCD) ↗ (Highest Common Factor, HCF)

```

def GCD(num1, num2):
    if num1 > num2 :
        smaller = num2
    else:
        smaller = num1
    for i in range(1, smaller + 1):
        if (num1 % i == 0) and (num2 % i == 0):      #i
            factor = i
    return factor

n1 = int(input("请输入第一个数"))
n2 = int(input("请输入第二个数"))

print("GCD = ", GCD(n1, n2))

```

```

n = int(input("请输入一个数"))
def rev_num(num):
    rev = 0

```

```
while num > 0:  
    remainder = num % 10  
    rev = (rev * 10) + remainder  
    num = num // 10  
return rev  
  
print("反转数=", rev_num(n))
```

```
s = input("请输入:")  
  
def rev_str(string):  
    x = ""  
    for i in string:  
        x = i + x  
    return x  
  
print(rev_str(s))
```
